

3.5" Diskettes

3.5" Diskettes

3.5" diskettes may have been superseded by the new range of digital media, but there are still applications where this format is appropriate and cost effective. Containing 1.44MB of data, the 3.5" diskette is an ideal format for use in schools and a perfect way of transferring or storing small amounts of data.

Branding the 3.5" diskette shutter allows your company identity to be clearly seen every time the diskette is in use, and helps users to identify the content. A range of packaging options and a number of different coloured body shells further enhances the opportunity to strengthen brand awareness.

At Direct

Corporate Design we offer in-house duplication of diskettes to a variety of customers, particularly those within the education sector. Contact us to discuss how best to fulfil your project requirements.
