

Digital Printing

NEW ultra fast digital CD & DVD printing!

As the first UK company to introduce the Tapematic 2print, we are now also able to offer digital CD and DVD printing in volume for an even quicker turnaround.

Digital printing optical media is a quick and efficient solution to screen or litho. No time consuming preparation is required with digital printing and once the chosen image has been loaded, the 2Print digital printer is able to print up to 1,000 discs per hour. With a minimum changeover time between jobs, the 2Print offers cost effective, high quality printing that gives manufacturers greater flexibility, enabling them to respond to requests in the shortest possible time.

The printing process is based on revolutionary micro inkjet head technology, employing UV curable ink. State of the art print heads and RIP proprietary software to produce the high quality images.

The 2print also enables us to develop printing into the next generation of Blue Ray and HD products, neither of which are reputed to react well to impact printing such as litho or screen. As labelling optical media is not an option, digital printing is truly the way forward.

Artwork

Customers can either supply their own artwork (visit our Client Area for Specifications and Templates) or enlist the advice of our team on content, design, layout, colours, and printing. Our vast experience of printing and duplicating CDs enables us to understand the importance of producing an accurate, colour matched, well designed product that meets our customer's objectives and reflects their corporate identity. Our professional packaging and fulfilment capabilities will ensure your product is presented professionally.

We always discuss project options with our customers so that we can be sure of a timely and efficient solution. Contact us now for more information.
